Machine Name or #	Machine Mfg. /Tonnage	Barrel Circumference*	S T D	I N S	Nozzle Diameter	Custom Length**

*<u>Standard or Insulated Design -</u> Standard Purge-Aways are designed for use OVER Insul-Vest insulating blankets. The barrel circumference should be measured around the exterior of the blanket.

If you wish to use Purge-Aways <u>without</u> insulating blankets under them, the Purge-Aways must be custom designed with integrated insulation. In this case, the circumference must be measured over the existing heaters including the electrical terminals or junction box.

Please check a box for Standard (STD) or Insulated (INS) to confirm your selection

**Custom Length - Standard Purge-Aways are 12-13" (300-325 mm) long. If you require longer Purge-Aways, please specify the length for each in the space provided.
